BAMBOO DECKING

PRODUCT INTRODUCTION & APPLICATIONS

BAMBOO DECKING

SIKLE SCD™
Art bamboo life

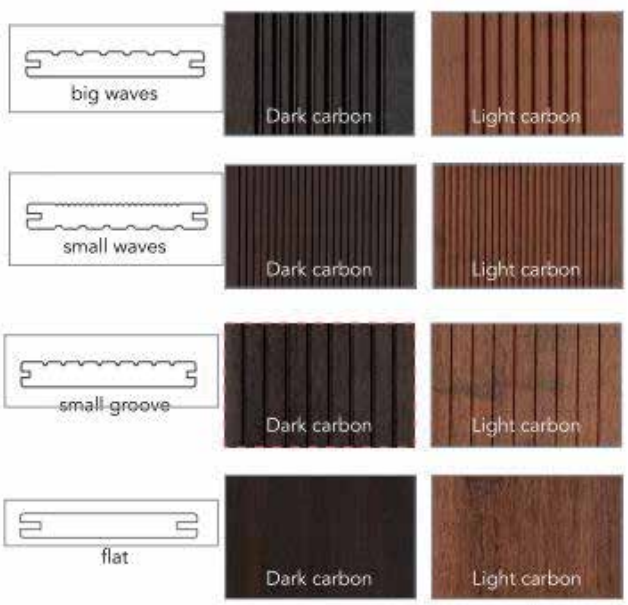

OUTDOOR BAMBOO DECKING

Outdoor Bamboo Decking uses a unique high-temperature, high-intensity compression process to remove sugar molecules from the bamboo, making the bamboo free of fungi and microorganisms.
This solves the problem of anti-corrosion and insect resistance and by changing the water-absorbing groups inside the bamboo,there by solving the problem of deformation and cracking, the material density, hardness and flexural strength are much higher than any wood.
Outdoor Bamboo Decking remains straight and very stable even after many years of installation.
Bamboo Decking is the ideal outdoor material.

PRODUCT PARAMETERS

LENGTH:	1860/2000/2500/3000/4000 mm
WIDTH:	68/140 mm
THICKNESS:	18/20/30/40 mm
DENSITY:	1200 kg/cm^3
SURFACE:	Flat/Small Groove/Small Waves/Big Waves
APPLICATION:	Private countyard/garden/park/seaside/hotel/ swimming pool

INSTALLATION PROCEDURES FOR OUTDOOR DECKING

1.PREPARATION OF CONCRETE FLOOR

Level the ground to be laid on the outdoor floor and pour 10-15CM thick concrete.

2.FIXING THE KEEL

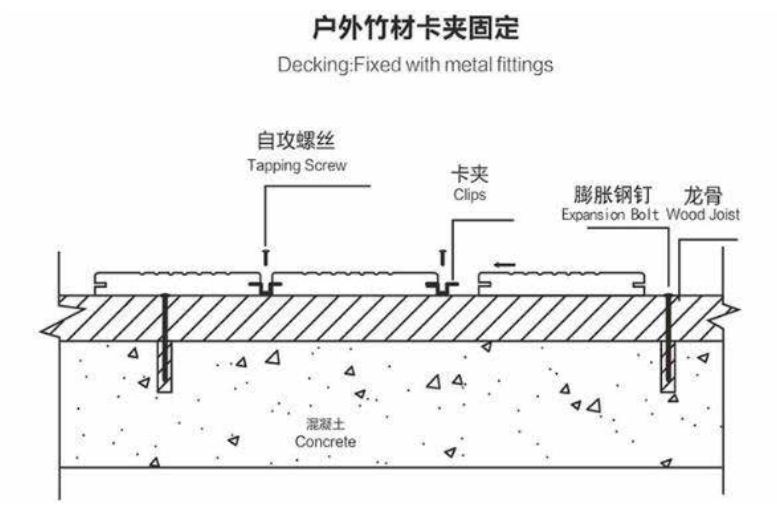

Use an impact drill or electric hammer to punch holes(about 10-12mm*60mm)on the concrete floor,one every 40cm(less than 40cm is counted as 40cm),drive pine wood plugs into the holes,and place them on the keel.Punch holes on the keel,the hole diameter is the same as the steel nails used,and the hole distance is the same as the ground hole distance.Then use 4*80 round nails to drive through the keel.

The clear distance between the keels is not more than 500mm,and it is recommended to use 400mm for the interview;the installation of the keels should be kept horizontal to ensure that the entire decking installation is completed and the buckles are flat and there are no obvious bumps;

3.FIXINGMETHOD

1）**Sweep fixing method** (for floors with grooves on the side): When installing the first board, use flat-head stainless steel self-tapping screws 4*45 on the outward side at a 45-degree angle, and the rest can be connected and fixed with floor connectors: specific the fixing method is as follows: firstly insert one side of the floor fastener (face up, the hole is perpendicular to the ground) into the slot of the first floor, and then press the side of the second floor against the first row of planks. Fasteners, insert the second row of floor fasteners on the other side of the second floor (the number of floor fasteners is the same as the keel), and then insert the third decking board... Install in sequence , about 4-8 pieces, and then use self-tapping screws to pass through the decking fasteners to fix the decking on the keel; the decking is installed in this order. The installation method of the last piece at the end is the same as the first piece, and the outward side is fixed with a 45-degree oblique screw from the rose screw.

2）**Direct fixing method** (for floors without grooves on the side): The first step is to place the outdoor floor in the required position, and then punch 2-3 holes evenly on the board surface along the center of the keel, with a diameter of 4mm and a depth of 35- 40mm; in the second step, use a drill with a diameter of 10mm to ream the top of the floor, and the depth is 2-3mm; in the third step, use 5*50 stainless steel countersunk head screws to drill the drilled holes to firm the floor.

BAMBOO
MAINTENANCE OF OUTDOOR FLOORS

1.MAINTENANCE CYCLE

The first maintenance is carried out in the third month after the paving is completed; the second maintenance is carried out in the ninth month after the paving is completed. Subsequent maintenance can be carried out once a year.

2.MAINTENANCE METHOD

Choose a sunny day after the floor is dry (it is recommended to carry out at least one week of continuous sunny weather).

1) Check for tightness: Check the floor for looseness and reinforce loose floors.

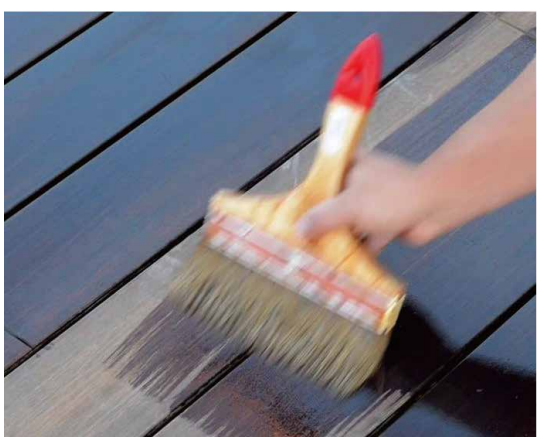

2) Cleaning and Sweeping: Clean up all corrosion, dust, dirt, oil, coal ash and other impurities on the floor surface. Before protection, the surface must be completely cleaned; clean the debris around the floor and the keel to make the drainage smooth.

3) Sanding: Use a soft steel brush to sand and clean the floor surface.

4) Oiling: Use the first coat of wood wax along the length of the brush.

5) Grinding: Use 80-100 grit sandpaper to polish the surface burrs.

6) Second oiling: Use a brush to apply the second wood wax oil along the length.

3.PRECAUTIONS

1) Immediately after use, put rags, brushes, and waste into metal containers to keep them clean and hygienic.

2) The second pass of wood wax oil is carried out 12 hours after the first pass of brushing.

BAMBOO
OUTDOOR FLOOR CARE AND MAINTENANCE

If we can carry out regular maintenance in accordance with our company's maintenance precautions, we have reason to believe that our customers can use heavy bamboo outdoor "new floors" every year.

To reiterate, the first maintenance should be carried out in the third month after the installation of the heavy bamboo floor of our company; the second maintenance should be carried out in the ninth month after the installation is completed. Subsequent maintenance can be carried out once a year.

BAMBOO BENEFITS

SIKLE bamboo is one of the fastest growing plants on earth. Although giant bamboo is formally not a wood but a grass, it has excellent hardwood-like characteristics. Discover the benefits that SIKLE Bamboo products can offer in your project!

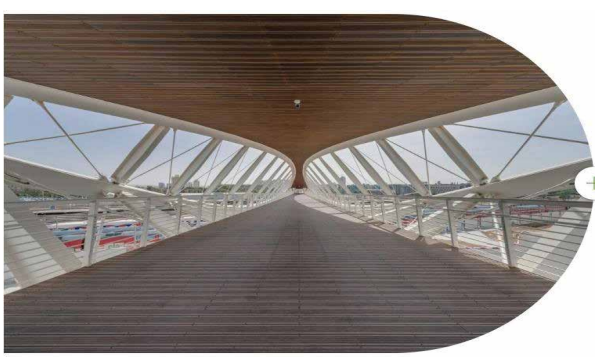

ENDLESS RESOURCE

Bamboo is an ‘endless’ resource. It grows faster than any other plant; up to 1 meter per day! Each year the 4-5 year stems are harvested, providing room for the younger bamboo to grow to maturity. During growth SIKLE bamboo absorbs more CO2 than is released during production. All solid SIKLE bamboo products are therefore guaranteed CO2 neutral over the complete lifecycle.

NATURAL BEAUTY

The most striking feature of SIKLE Bamboo products is certainly its natural beauty. The beautiful natural grain gives bamboo a distinct design appearance. Combined with the vast choice of different styles, configurations and colors, there is always a SIKLE bamboo product available which will match your preferences.

HARD&DURABLE

Bamboo, after processing, is very hard and durable. This means SIKLE Bamboo flooring and decking can be used in heavy duty applications, where conditions such as high-traffic are expected. As well as this, several products are more than suitable for being used outdoors.

HIGH TABILITY

Due to the composition of individual strips, bamboo will shrink and swell less than most solid wood species, providing a very stable solution. This means that unique and intriguing solutions and creations can be developed.

HIGH STABILITY

Due to the composition of individual strips, bamboo will shrink and swell less than most solid wood species, providing a very stable solution. This means that unique and intriguing solutions and creations can be developed.

HEALTHY AND FIRE RESISTANT

SIKLE Bamboo products are also a healthy choice as they are antistatic and anti-allergic. Furthermore, they have very low emissions of harmful VOCs (Volatile Organic Compounds). Due to the high density, several SIKLE Bamboo products fulfill stringent fire safety requirements and SIKLE has tested almost the full range of bamboo products.

A WIDE VARIETY OF CHOICE

Combined with the vast choice of different styles, configurations and colors, there is always a SIKLE Bamboo product available to match the desired needs. From commercial to domestic use and industrial applications to unlimited solutions, SIKLE SCD has both the knowledge and expertise to help you progress.

UP TO 20 YEARS GUARANTEE

Developing the best bamboo product is only possible through continuous attention for each detail during production. The Chinese SIKLE team was created just for that. Only because of their daily effort, a SIKLE Bamboo product is very different from a standard Chinese bamboo product. And in the unlikely case that something was overlooked, customers can count on our full support and guarantee up to 20 years.

BAMBOO CLADDING & SOFFIT

SIKLE SCD™
Art bamboo life

MAINTENANCE OF SOFFIT AND CLADDING

1.MAINTENANCE CYCLE

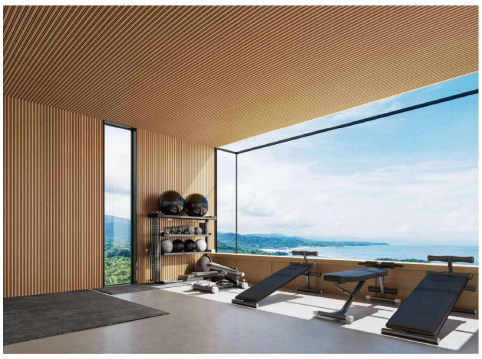

Dust the dust on the surface of the wallboard with a duster every two weeks or one month, which can effectively reduce the adsorption of dust on the surface and prolong the use time.

2.MAINTENANCE AND CLEANING METHOD

The film on the surface of the wallboard has a certain degree of air permeability, and the stain must be cleaned up in time to prevent it from being adsorbed to the inside of the wallboard for a long time. The best time to decontaminate is to scrub the dirt in time before the dirt is completely dry. The order of cleaning the dirt should be from the outside to the inside, rinse with an absorbent sponge block, do not use hot water. Remember not to use sharp objects, so as not to scratch the surface of the wallboard.

1)**Oil stains:** For local oil stains, pour the neutral detergent stock solution on a towel to wipe; for large areas of oil stains, increase the number of wipes, and then wipe dry with water.
2)**Rust:** Dilute it with a neutral detergent, leave it on for 10 minutes, and then remove it with water.
3)**Ink, coffee, juice:** Dilute with neutral detergent, then remove with water.
4)**Nail polish, paint, glue:** First carefully remove the dirt, then wash it with alcohol, and remove it after the dirt softens.

For the walls near the balconies and windows, when strong light must be irradiated, the curtains should be drawn to avoid discoloration and fading caused by long-term sunlight.

BAMBOO FEATURE

Bamboo isn't a plant, it's a lifestyle. Eco-friendly & sustainable, exactly meeting the concept of social development, endless possibilities to make your idea come true.

BAMBOO APPLICATION

Interior decorative, exterior building, school, museum, hotel, project solution.

BAMBOO FLOORING

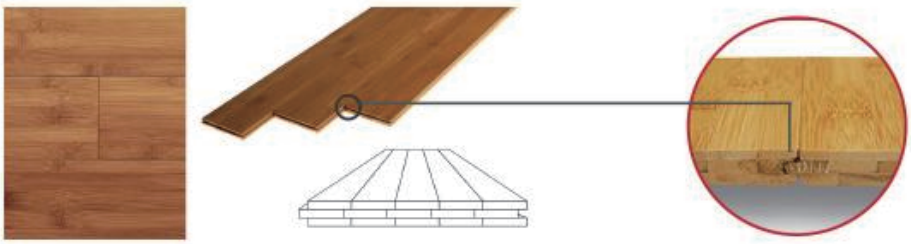

PRODUCT INTRODUCTION & APPLICATIONS

BAMBOO FLOORING

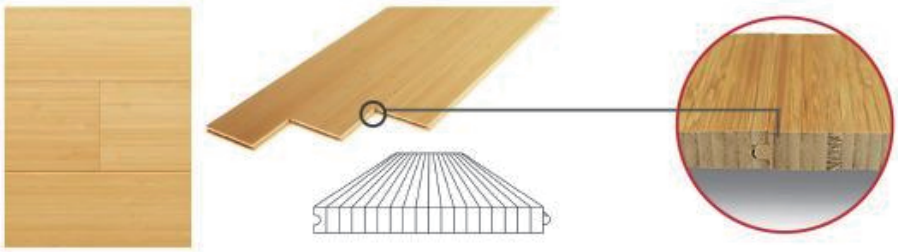

PRODUCT
BAMBOO FLOORING TYPES

SIKLE SCD™
Art bamboo life

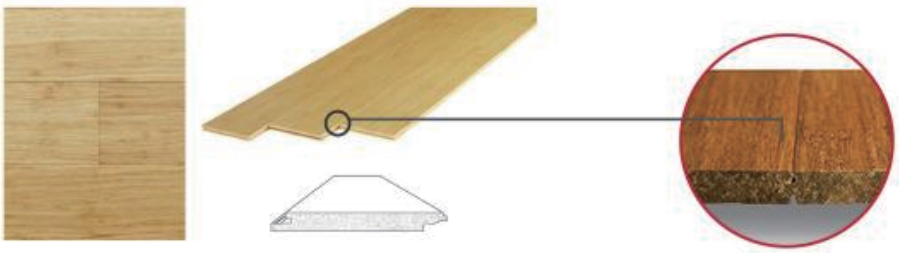

■ **Horizontal**:
Strips of bamboo are arrayed on their side, also referred to as flat grain. Creates a pattern of small marks from the "nodes" of the bamboo culm.

■ **Vertical**:
Strips of bamboo are arrayed vertically, also referred as edge grain. Minimizes the appearance of the "nodes" from the culm.

■ **Strand Woven**:
Irregular strips of bamboo are woven together for added strength and then compressed under extreme heat and pressure, creating a unique and beautiful marbled grain. Starnd Woven bamboo flooring is also 2-3X harder than traditional hardwoods and classic bamboo flooring(horizontal & vertical).

SIKLE SCD™
Art bamboo life

NATURAL BAMBOO MAINTENANCE METHODS:

1. **Maintenance period**: Depending on the intensity of sunlight and the local climate, the maintenance period can be extended or shortened:
A)the outdoor fully exposed material maintenance period is about 2-3 years;
B)Outdoor ceiling structure should be maintained every 5 years;
C)Outdoor wall decoration materials should be maintained once every 3 years;
D)Indoor materials should be maintained every 10 years.

2. **Maintenance method**: Remove dust, spray or brush outdoor oil or paint surface.

Weathered and dirty floors

Weathered but cleaned flooring

Floors that have been oiled and maintained
